

# **Free-Radicals: Chemistry and Biology**

Prof. Attilio Citterio

Dipartimento CMIC “Giulio Natta”

<http://iscamap.chem.polimi.it/citterio/education/free-radical-chemistry/>

# Content

## 1. Introduction

- Current Status of Radicals Chemistry
- What is a Radical
- Free Radicals and Life

## 2. Historical Aspects

## 3. Electronic Structure and Bonding

## 4. Active Oxygen Specie,

- $O_2$ ,  $O_2^{\cdot\cdot}$ ,  $HO_2^{\cdot}$ ,  $^1O_2$ ,  $H_2O_2$ ,  $HO^{\cdot}$
- Chemistry
- $H_2O_2$  and peroxides

## 5. Radical Reactions

- Atom transfer
- Addition to multiple bonds
- Homolytic Aromatic Substitution
- Electron Transfer (oxidation-reduction)

## 6. Thermodynamics

## 7. Free Radical Kinetics

- First-order Reaction
- Second-order Reaction
- Steady-State
- Chain-reactions
- Redox chain reactions
- Inhibition

## 8. Radiation Chemistry

- Tools
- Specie:  $e^-$ (aq),  $H^{\cdot}$ ,  $HO^{\cdot}$ ,  $H_2O_2$ ,  $H_2$ ,  $O_2^{\cdot\cdot}$
- Pulse Radiolysis/Flash Photolysis

## 9. Lipid Peroxidation

- Chemistry
- Measurement
- Effects

## 10. Antioxidants

- Preventive
- Chain-breaking
- Small molecule (Vit. C/E, CoQ, Urate).
- Enzymes
- Chelates

## 11. Iron and Free Radical Chemistry

- Reactions
- Complexes and redox chemistry

## 12. DNA and Protein (As radical targets)

## 13. Photo reactions

- Photochemistry
- Photosensitization

## 14. Detection of Radicals

- TBARS
- Fluorescence
- Cyt C /NBT
- Strategies 1. SOD, CAT

## 15. EPR Detection of Radicals

- Direct Detection
- Spin Trapping
- Transition metal

## 16. Nitric Oxide/NOS

## 17. Oxygen radicals/ROS

POLITECNICO DI MILANO

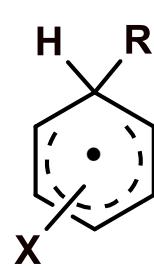

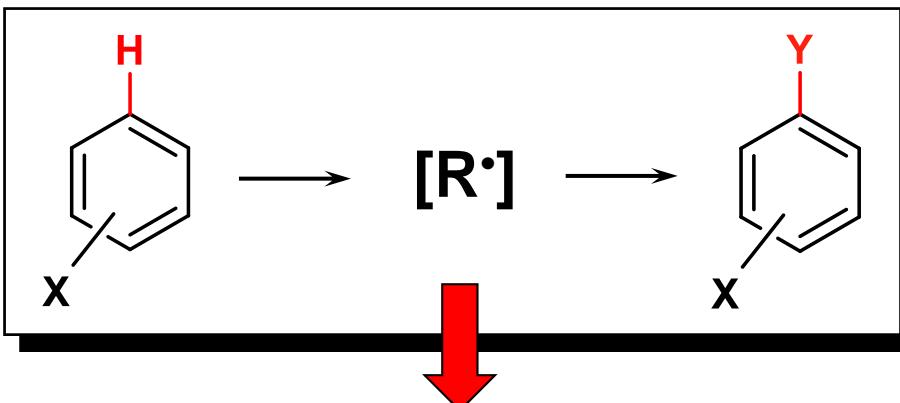

# Homolytic Aromatic Substitution

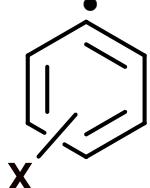

Prof. Attilio Citterio

Dipartimento CMIC "Giulio Natta"

# Paramagnetic Intermediates in the Homolytic Aromatic Substitution

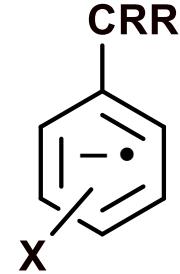

Cyclohexadienyl  
radical

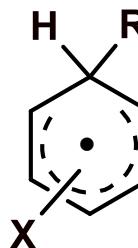

Aryl  
radical

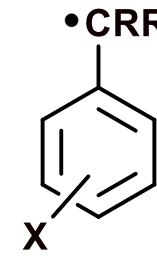

Aryl  
cation  
radical

Aryl  
anion  
radical

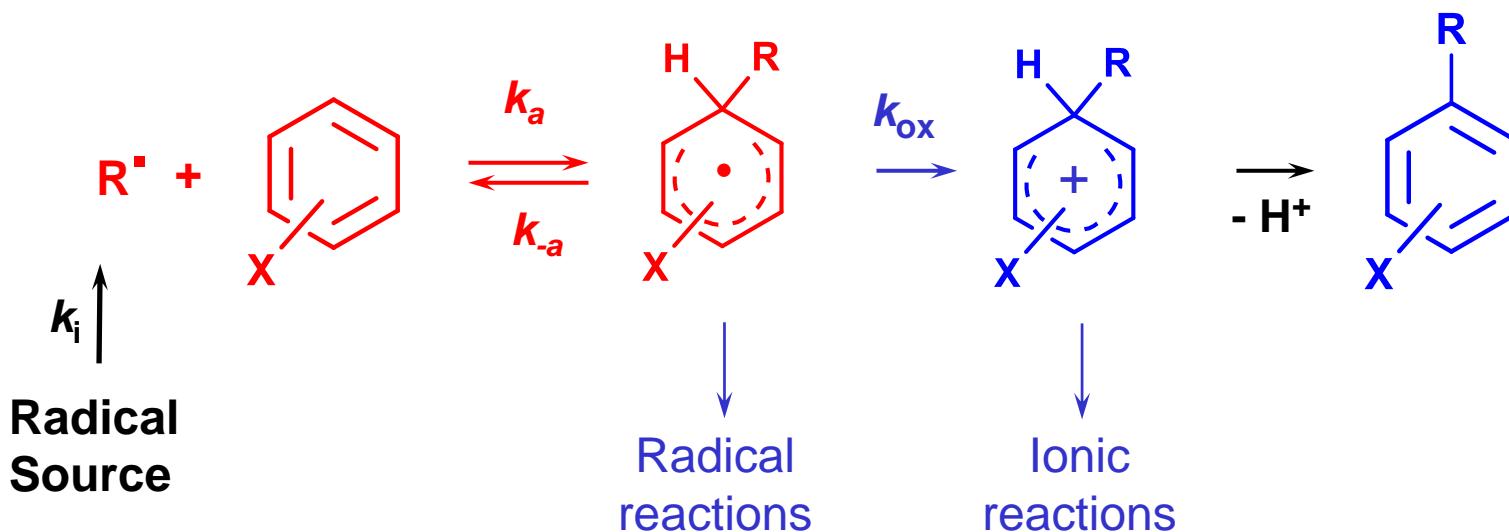

Cyclohexadienyl  
radical (ipso)

Benzyl  
radical

# Homolytic Aromatic Substitution via Cyclohexadienyl Radicals (Mechanism)

**Step A :** Reactivity ( $k_a$ )  
Regioselectivity  
Reversibility ( $k_a/k_{-a}$ )

**Step B :** Radical Rearrangements  
Oxidation/Disproportion  
Ionic Reactions

# Rate Constants and Substituent Effects in the Radical Addition to Aromatics

**Addition Rate Constants of some radicals to Benzene**

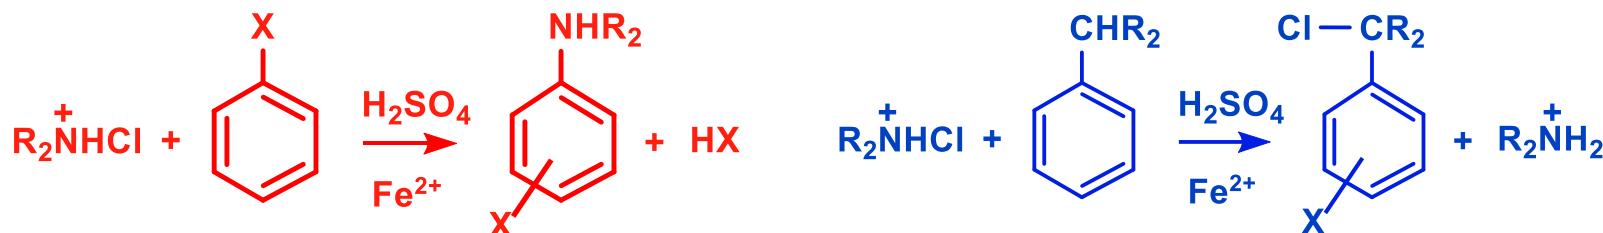

Radical	T(°K)	Source	$k_a$ (M <sup>-1</sup> ·s <sup>-1</sup> )
(CH <sub>3</sub> ) <sub>2</sub> NH <sup>+</sup>	298	R <sub>2</sub> N-Cl	2.1 × 10 <sup>7</sup>
HO <sup>·</sup>	298	H <sub>2</sub> O, e <sup>-</sup>	3.9 × 10 <sup>8</sup>
PhCOO <sup>·</sup>	351	(PhCOO) <sub>2</sub>	1.1 × 10 <sup>6</sup>
CH <sub>3</sub> COCH <sub>2</sub> <sup>·</sup>	353	Mn(III)/Ac	5.8 × 10 <sup>4</sup>
Ph <sup>·</sup>	298	PhN <sub>2</sub> <sup>+</sup> /Ti <sup>3+</sup>	1.1 × 10 <sup>6</sup>
CH <sub>3</sub> <sup>·</sup>	338	(CH <sub>3</sub> CO <sub>2</sub> ) <sub>2</sub>	1.0 × 10 <sup>4</sup>
5-Hexenyl <sup>·</sup>	333	Perox./Cu <sup>+</sup>	3.8 × 10 <sup>2</sup>
i-Bu <sup>·</sup> , t-Bu <sup>·</sup>	333	Perox./Cu <sup>+</sup>	< 10

**Substituent effects in the addition of some radicals to para substituted benzenes**

Radical	$\rho^+$
C <sub>6</sub> H <sub>11</sub> <sup>·</sup>	+ 1.1
CH <sub>3</sub> <sup>·</sup>	+ 0.1
Ph <sup>·</sup>	+ 0.1
HO <sup>·</sup>	- 0.3
PhCOO <sup>·</sup>	- 1.6
CH <sub>3</sub> COCH <sub>2</sub> <sup>·</sup>	- 1.5
i-C <sub>3</sub> H <sub>7</sub> OCO <sub>2</sub> <sup>·</sup>	- 2.3

- Radicals Ph<sup>·</sup> and OH<sup>·</sup> add easily but show low substrate selectivity
- Electrophilic radicals (R<sub>2</sub>NH<sup>+</sup>, RCO<sub>2</sub><sup>·</sup>) add fast with good selectivity
- Nucleophilic carbon radicals add inefficiently with moderate selectivity

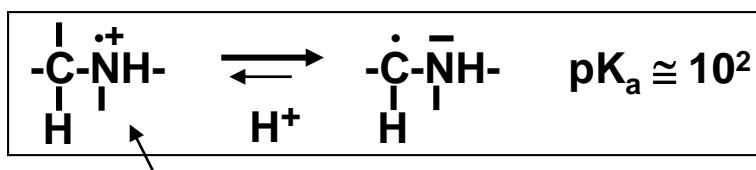

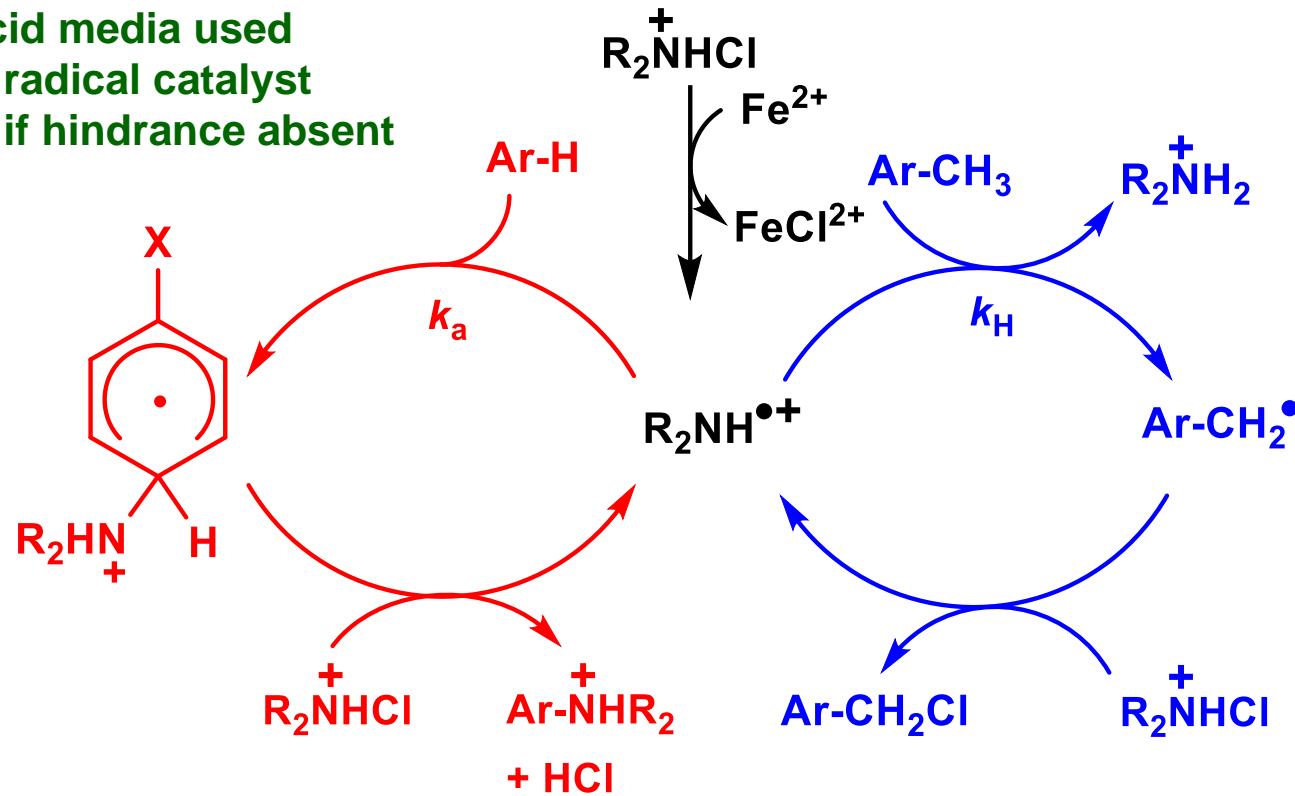

# Homolytic Aromatic Amination and Benzylic Halogenation with N-Chloramines

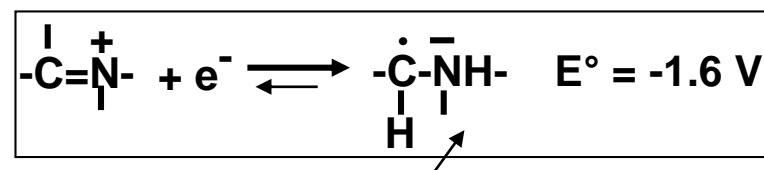

R	X	Yield %	Regoselectivity			side-chain funct.
			<i>o</i>	<i>m</i>	<i>p</i>	
H	H	82	-	-	-	-
Me	H	95	-	-	-	-
Me	Me	82	9.6	54.2	36.2	5
Me	Bu <sup>t</sup>	72	1	22.8	77.2	-
Me	OMe	65	8.9	1	91.1	-
Me,Bu <sup>t</sup>	Me	50	10	50	40	30
c-C <sub>6</sub> H <sub>11</sub>	Me	-	-	-	-	98
c-C <sub>6</sub> H <sub>11</sub>	m-diMe	-	-	-	-	96

# Amination/Halogenation with N-Chloramines

- Very acid media used
- Cation radical catalyst
- $k_a > k_H$  if hindrance absent

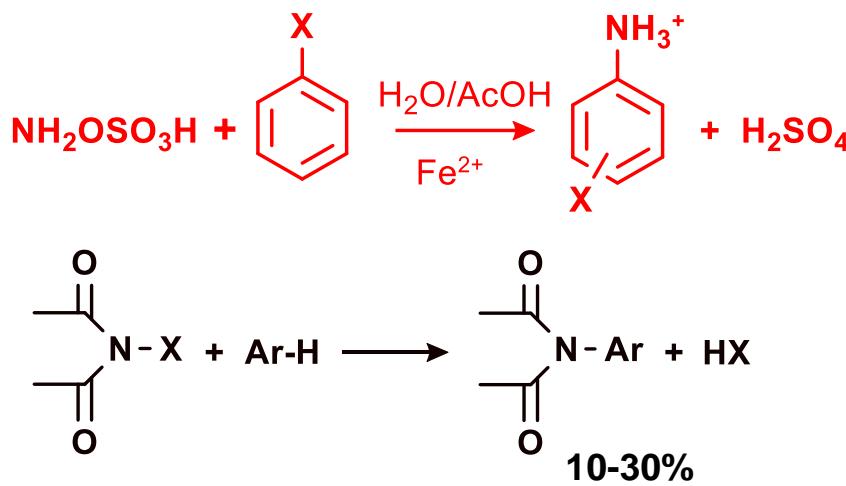

Sensitive to deprotonation

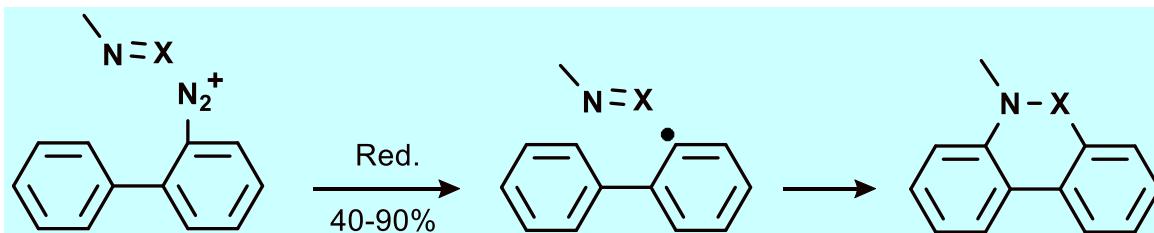

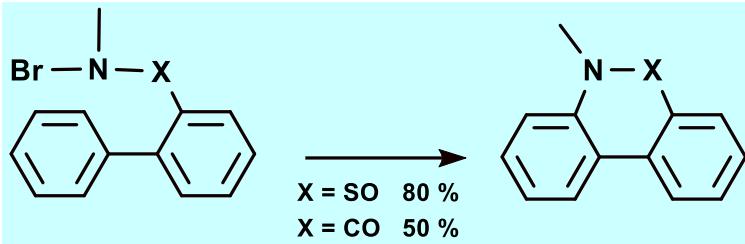

Sensitive to oxidation

# Inter- and Intramolecular Amination (Examples)

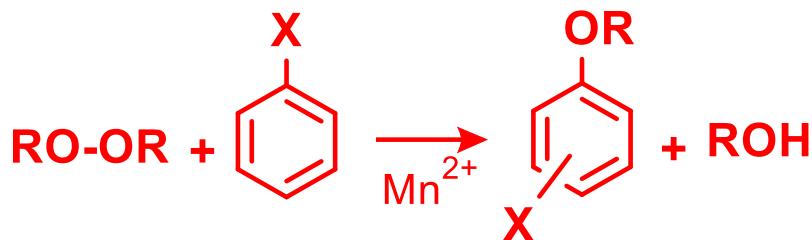

X	Yield %	Selectivity		
		o	m	p
H	65	-	-	-
OCH <sub>3</sub>	60	28.5	1.7	69.8
Me	53	35.7	22.7	41.6
Bu <sup>t</sup>	58	3.7	43.6	52.7
Cl	24	20.7	20.6	58.7
CO <sub>2</sub> Et	21	23.0	45.6	31.4
CN	7	9.8	51.6	38.6

(for N-Br see benzylic/allylic halogenation)

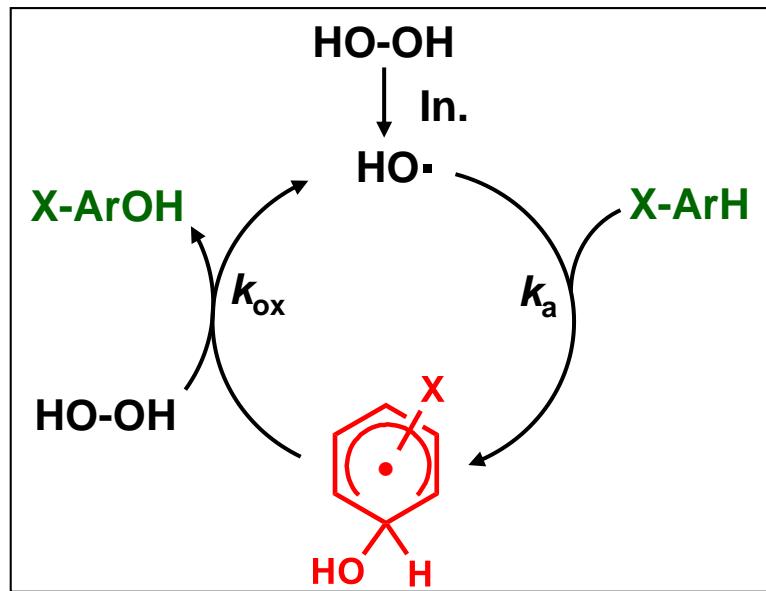

# Homolytic Aromatic Hydroxylation

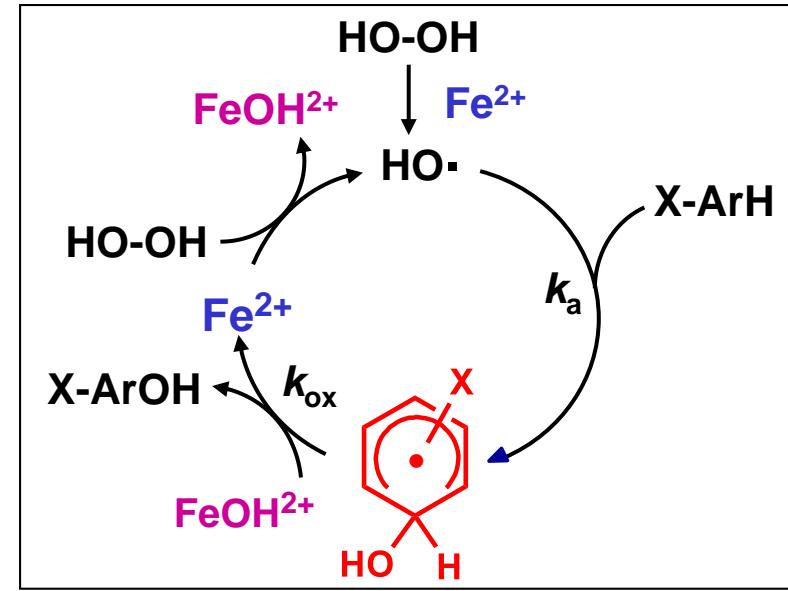

$\left\{ \begin{array}{l} \text{R = H; M}^{\text{n}+} = \text{Fe}^{2+}, \text{Ti}^{3+} \text{ [Fenton]} \\ \text{R = OCOAr; M = Cu}^+ \text{ (only Ar because} \\ \text{the decarboxylation of aroyloxy} \\ \text{radical is slow } k_{300K} = 10^6 \text{ s}^{-1} \end{array} \right.$

## Direct Redox Chain Process

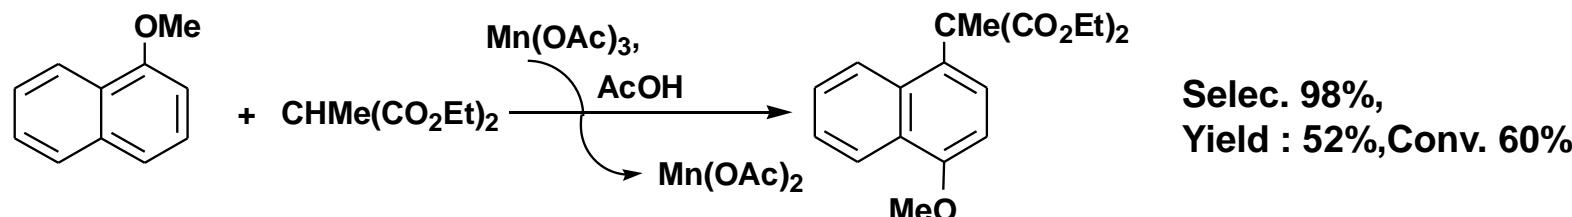

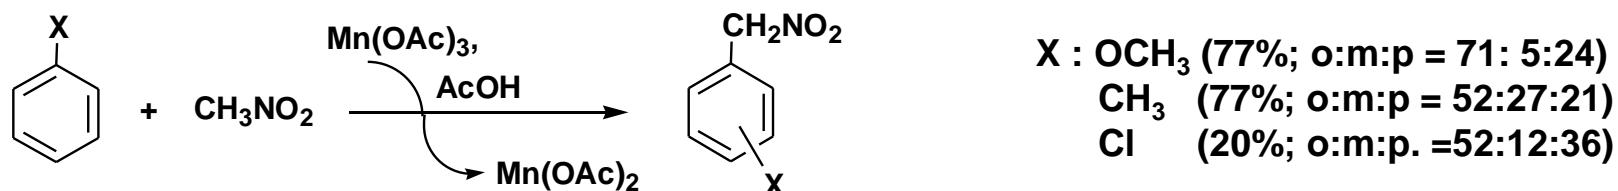

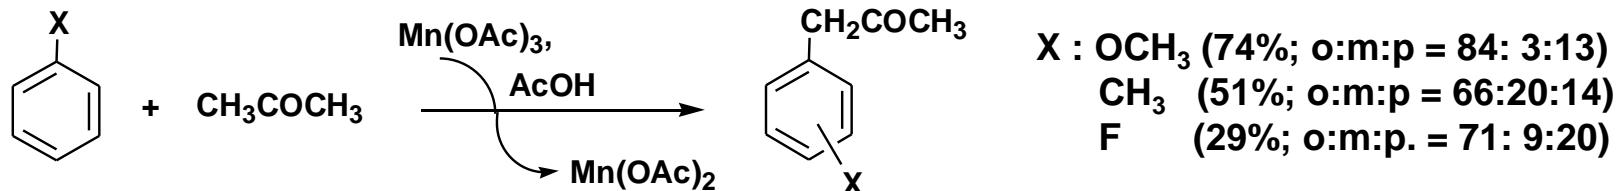

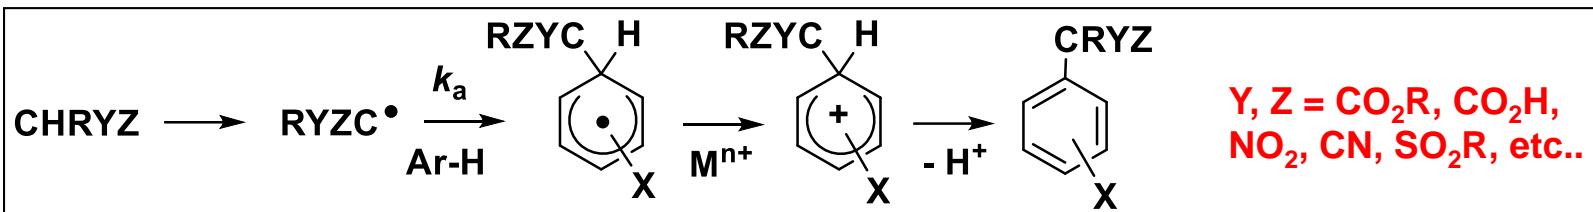

## Catalyzed Redox Chain Process

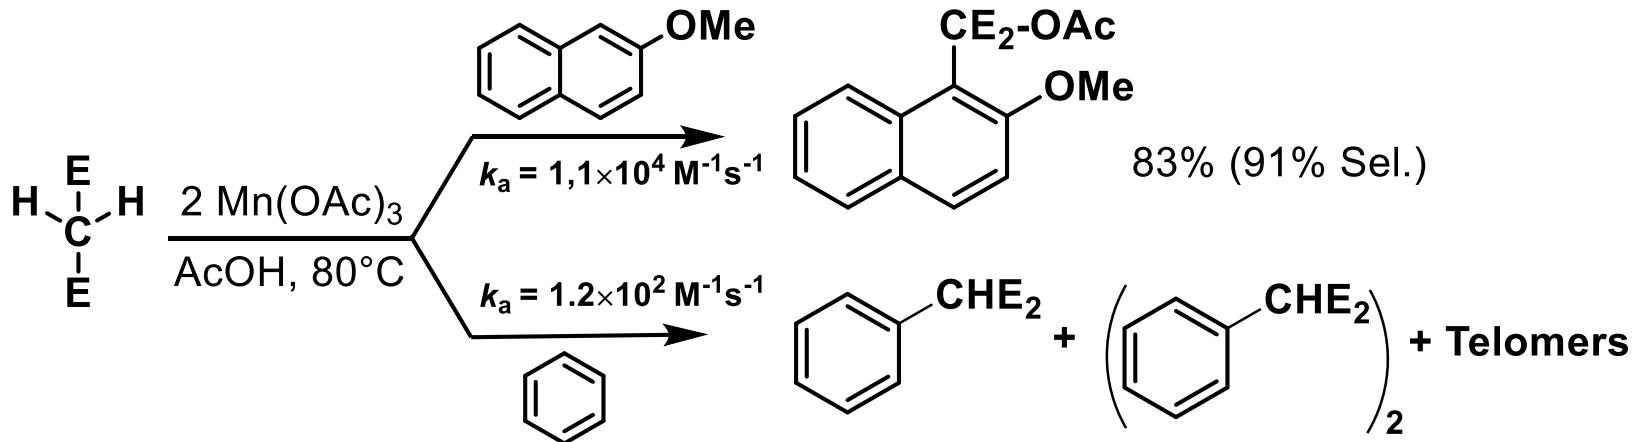

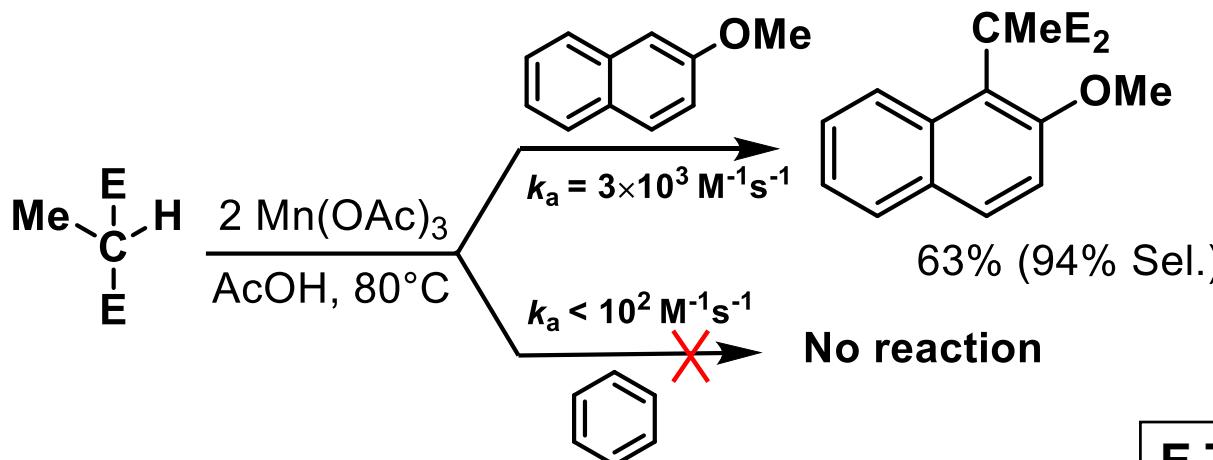

# Homolytic Aromatic Alkylation

Oxidative addition of **electrophilic radicals** (stoichiometric redox)

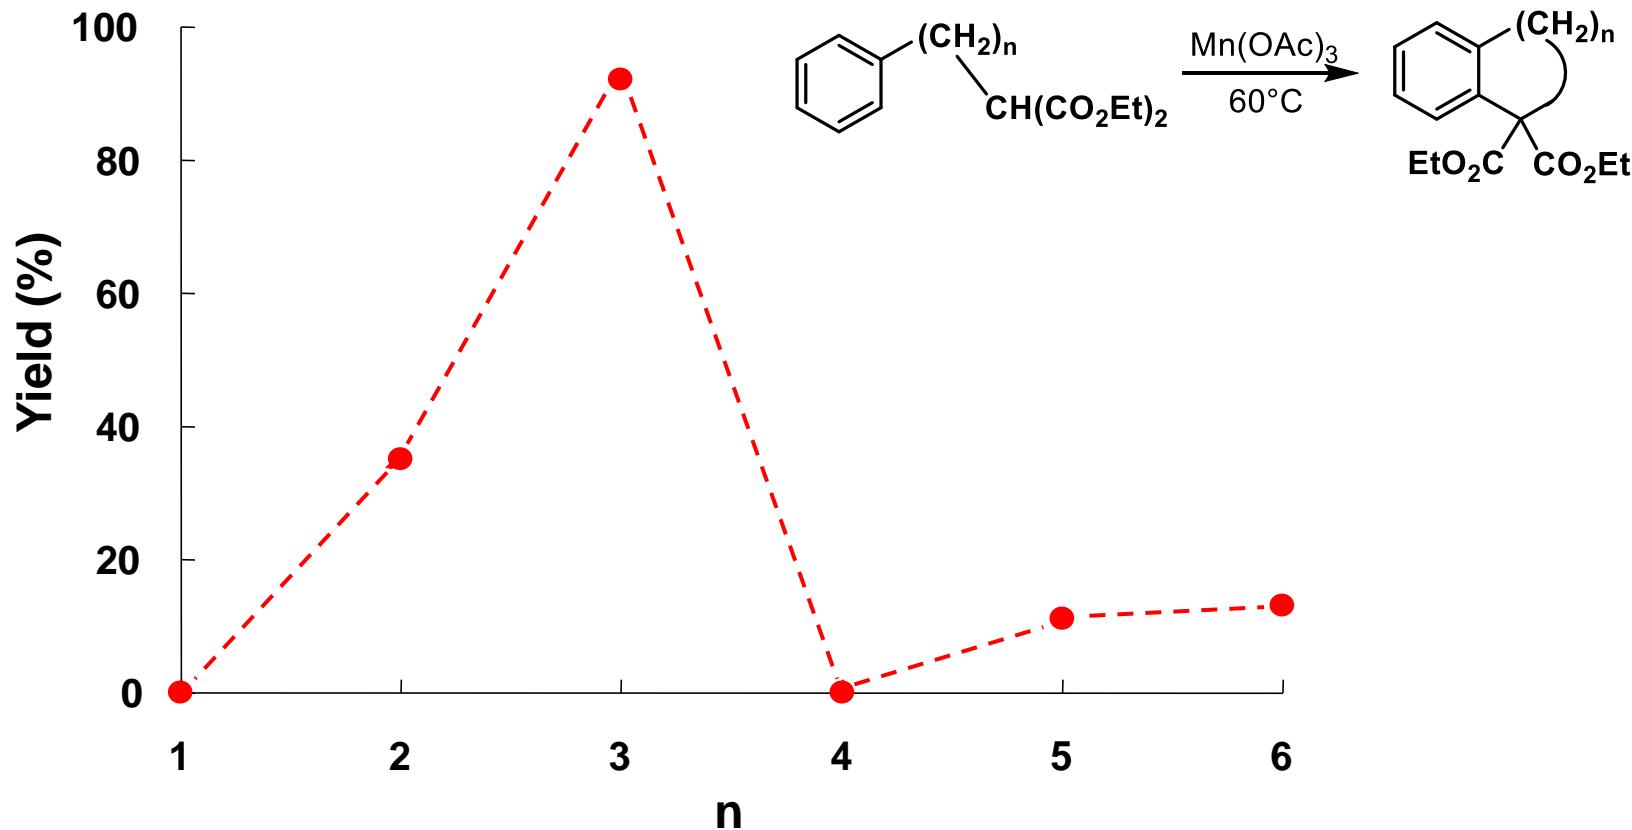

# Competition Reaction in the Homolytic Aromatic Alkylation

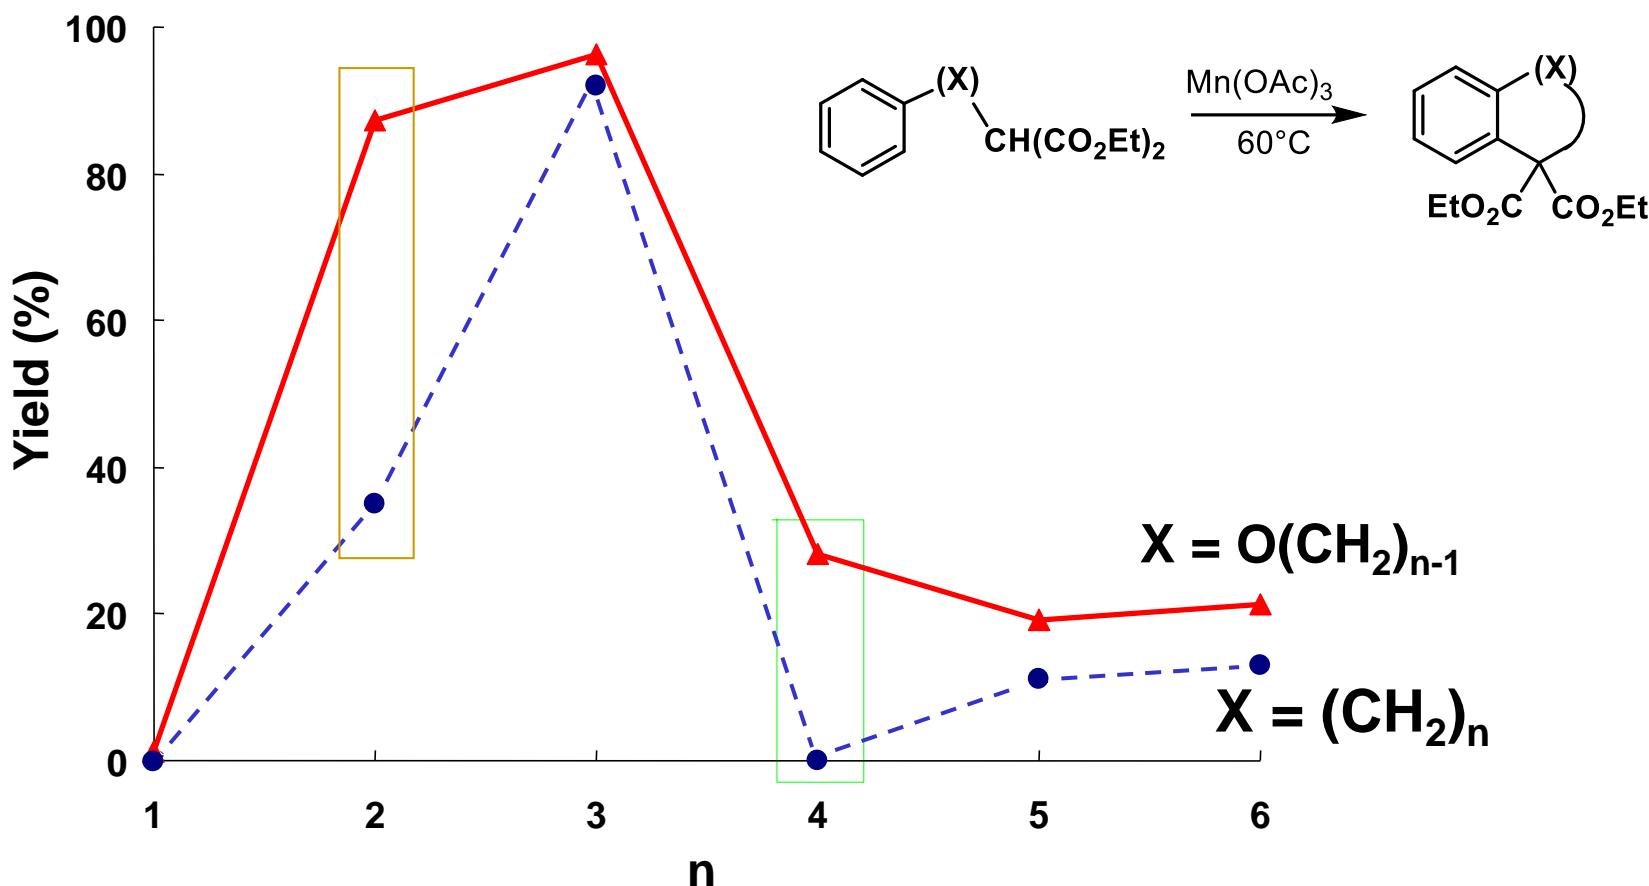

# Intramolecular Aromatic Substitution by Malonyl Radicals

Source: oxidation of  $\omega$ -arylalkylmalonates by Mn(III) and Fe(III) salts

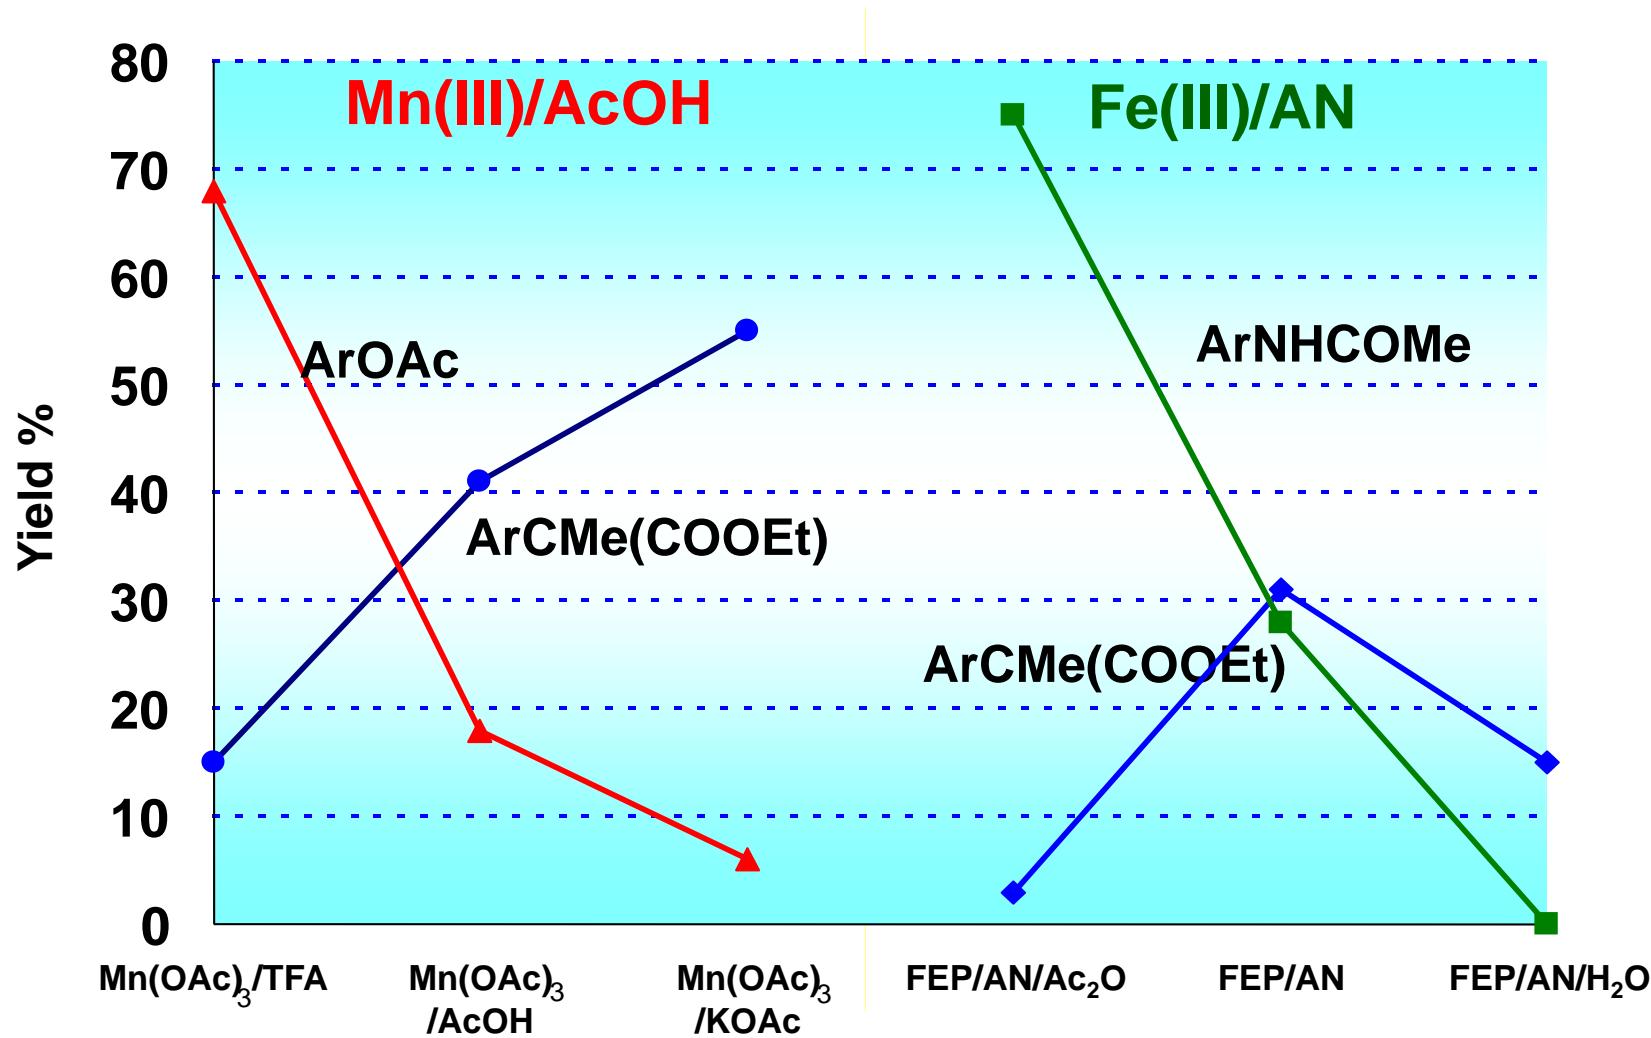

A. Citterio et al., J. Org. Chem. 54, 2713 (1989).

# Intramolecular Aromatic Substitution by Malonyl Radicals

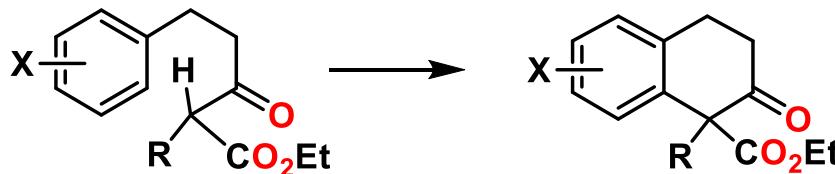

A. Citterio et al., *J. Org. Chem.* 54, 2713 (1989).

# Ligand/Metal Effect in the Oxidation of Ethyl Methylmalonate in the Presence of 2-Methoxynaphthalene

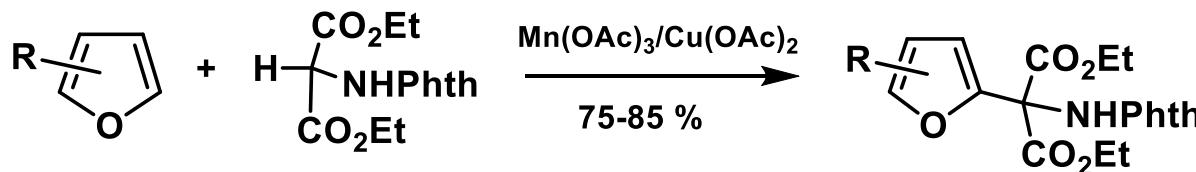

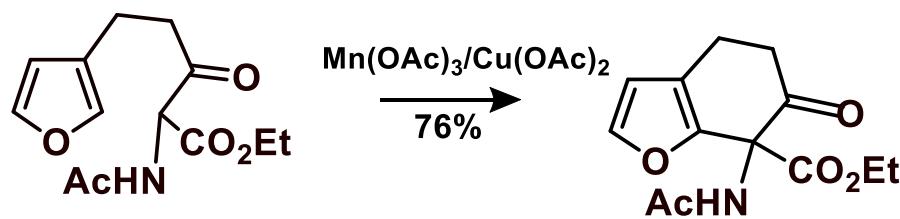

# $\alpha$ -Amido- and $\alpha$ -OxyAlkyl Radical Cyclization

R = CO<sub>2</sub>Et, 80-90%; Me, 25-60 %  
R = NHAc, OMe, OAc, 0%

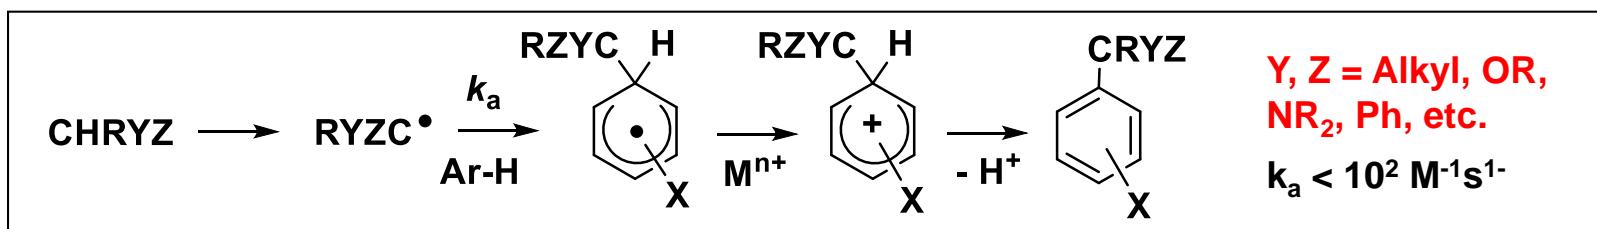

Moreover, with more electron-rich aromatics:

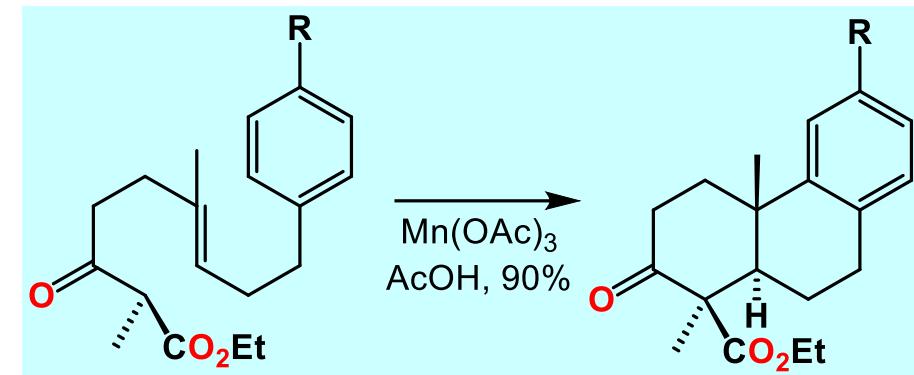

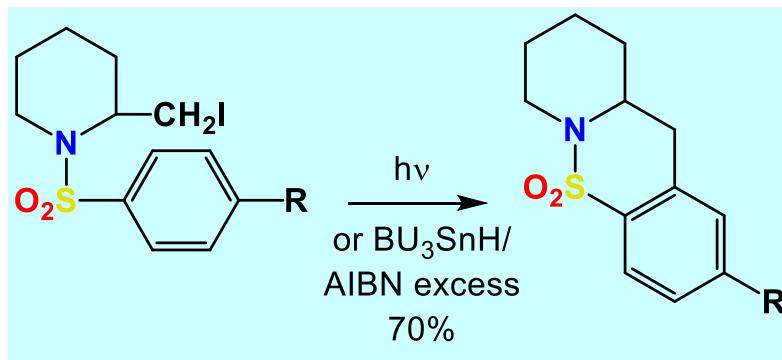

A. Citterio et al. *Tetr. Lett.* 1993 , 7981

# Homolytic Aromatic Alkylation (2)

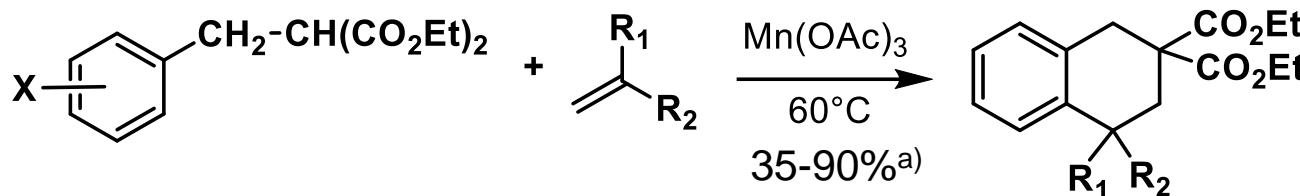

The intermolecular oxidative addition of **nucleophilic radicals** is quite slow!

However, intramolecular additions are possible ( $k_a = 10^3\text{-}10^5 \text{ M}^{-1}\text{s}^{-1}$ )

# Addition-Cyclization of Benzylmalonates to Olefins

**Addition rate constants of diethylbenzil malonic radicals to alkenes<sup>b)</sup>**

Olefin	$k_a (\text{mol}^{-1}\text{s}^{-1})$
$\text{CH}_2=\text{CH-Ph}$	$8.0 \times 10^6$
$\text{CH}_2=\text{CH-CN}$	$7.1 \times 10^4$
$\text{CH}_2=\text{CH-COOMe}$	$5.7 \times 10^4$
$\text{CH}_2=\text{CH-SiMe}_3$	$3.9 \times 10^4$
$\text{CH}_2=\text{CH-n-C}_6\text{H}_{13}$	$9.8 \times 10^4$
$\text{CH}_2=\text{C(Me)-i-Pr}$	$4.4 \times 10^5$

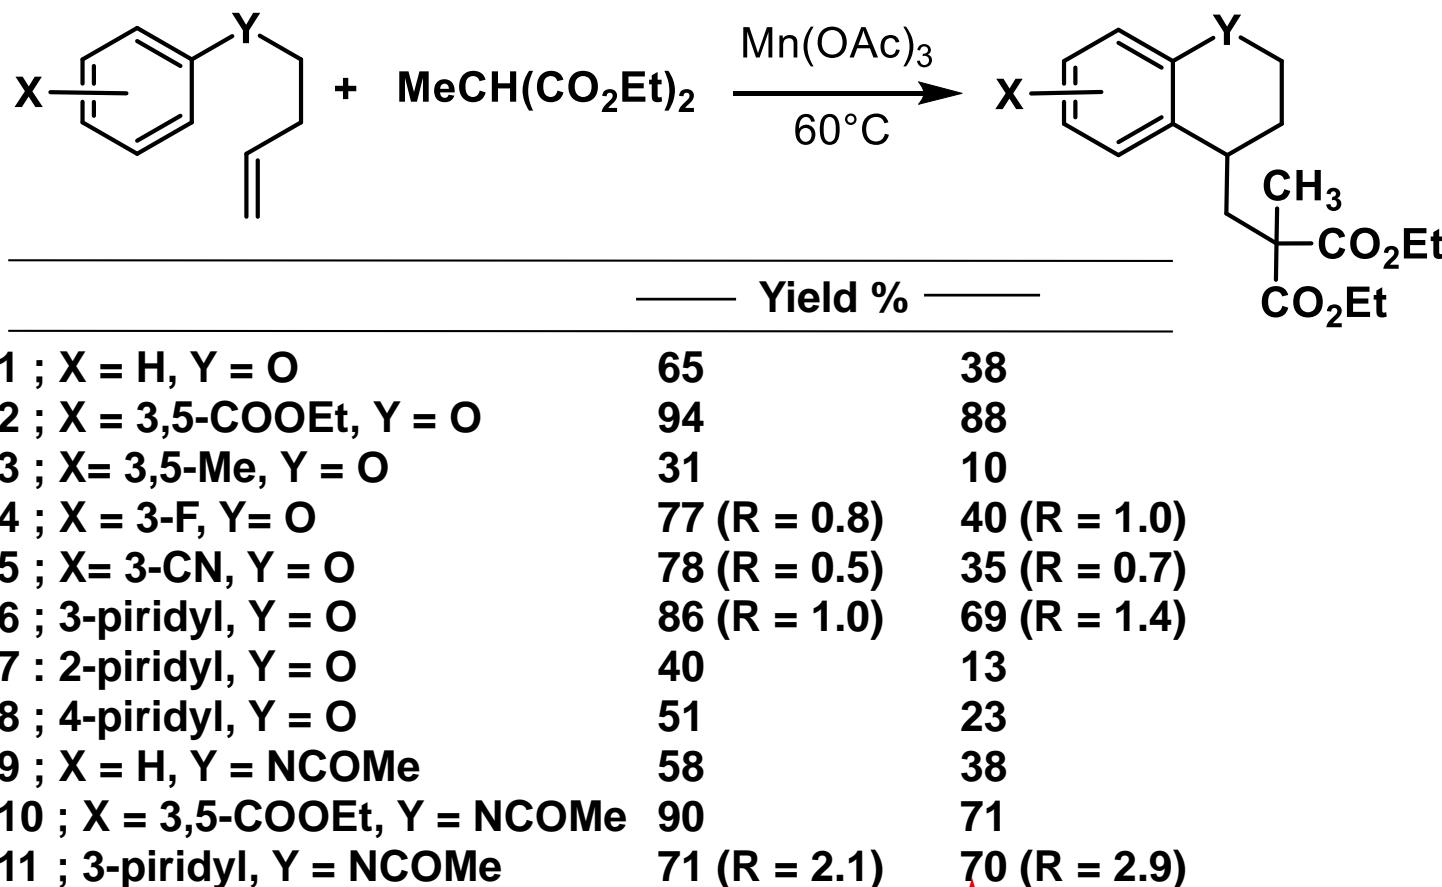

**Cyclization rate constants at 333 °K in AcOH**

X-Ar	R <sub>1</sub>	R <sub>2</sub>	$k_a (\text{s}^{-1})^\text{a)}$
Phenyl	H	Ph	$\sim 2.0 \times 10^1$
Phenyl	H	SiMe <sub>3</sub>	$4.2 \times 10^3$
Phenyl	H	n-C <sub>6</sub> H <sub>13</sub>	$5.6 \times 10^3$
3-Piridyl	H	n-C <sub>6</sub> H <sub>13</sub>	$4.2 \times 10^5$
Phenyl	Me	i-Pr	$3.2 \times 10^2$
3-Piridyl	Me	i-Pr	$1.2 \times 10^6$

 Catalyst : CuCl (8%)

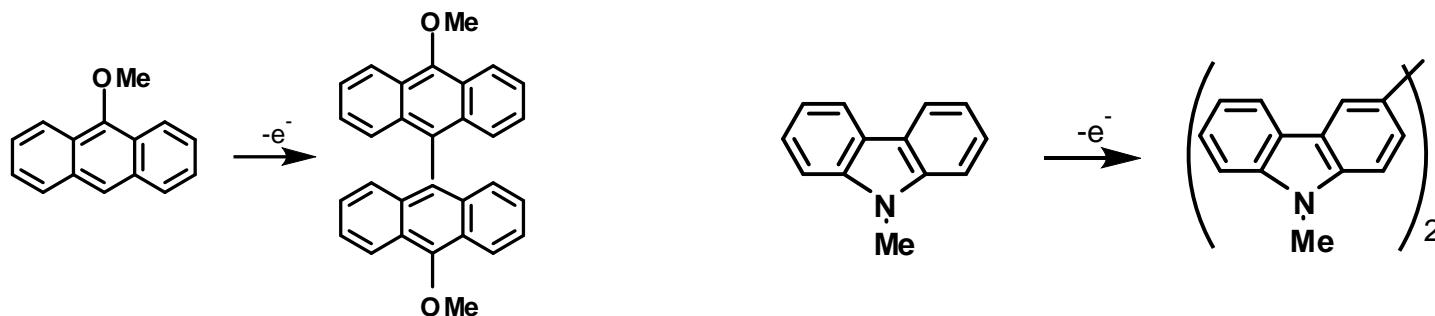

# Substitution via Aromatic Cation Radicals

- The oxidation of aromatic substrates by strong oxidants can involve the aromatic pi-system with formation of cation radicals. These intermediate, depending on the aromatic substitution, can evolve following three main routes :

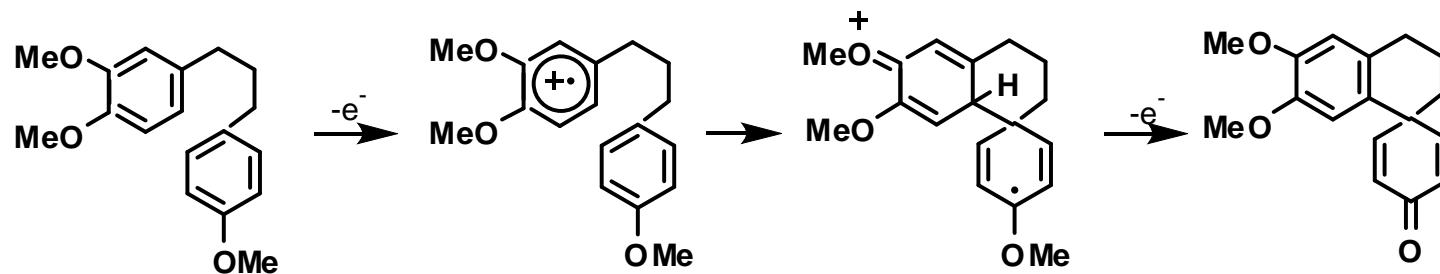

# Dimerization Via Cation Radicals

## 1) Intermolecular Processes

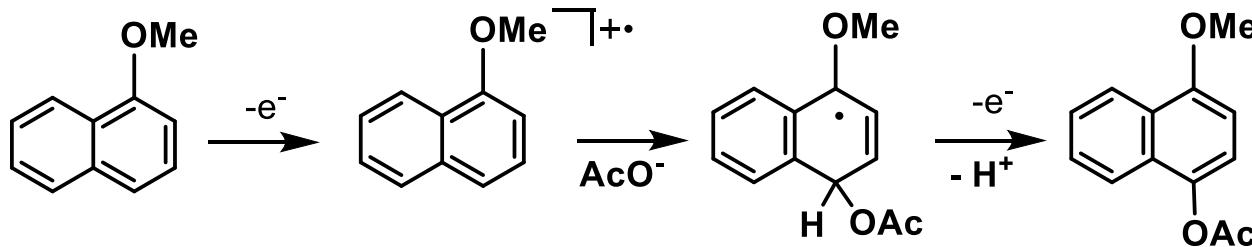

S. Torii *Electro-organic Synthesis, Oxidations*, VCH 1985

## 2) Intramolecular Processes

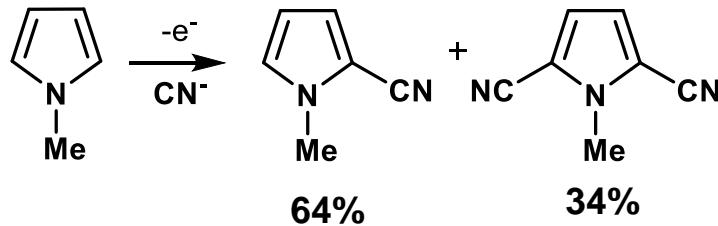

E. Kotani et al. *JCS Chem. Comm.*, 1973, 550; TELE, 1986, 95  
L.L. Miller, et al. *J. Am. Chem. Soc.*, 1971, 93, 5941

# Nucleophilic Substitution via Cation Radicals

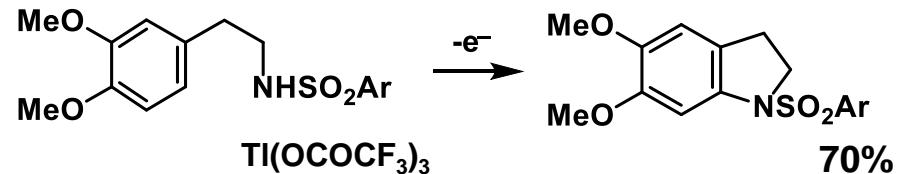

Acetoxylation of aromatics can be obtained by electrochemical oxidation or by high valent metal salts ( $M = \text{Ce(IV)}, \text{Co(III)}, \text{Fe(III)}, \text{Mn(III)}$ , etc.)

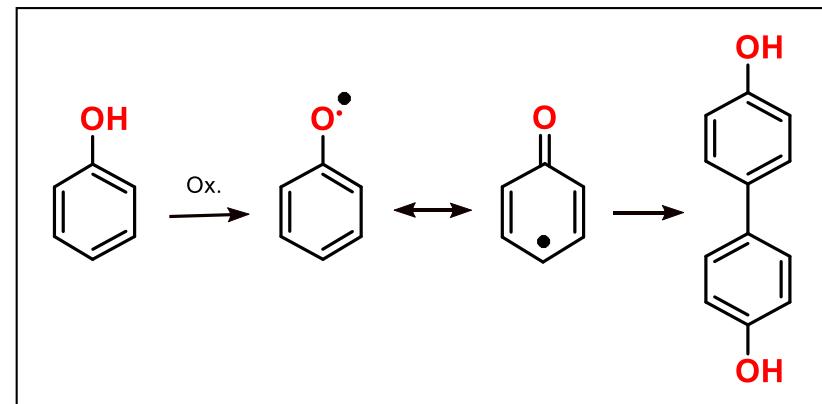

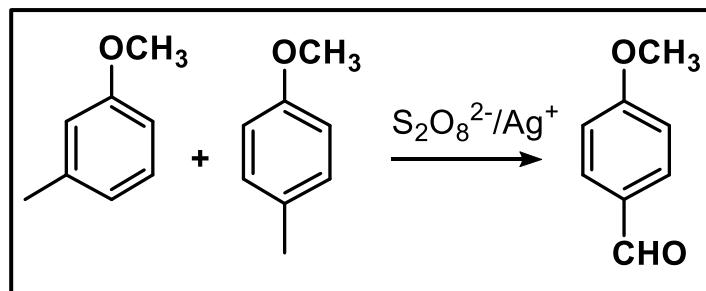

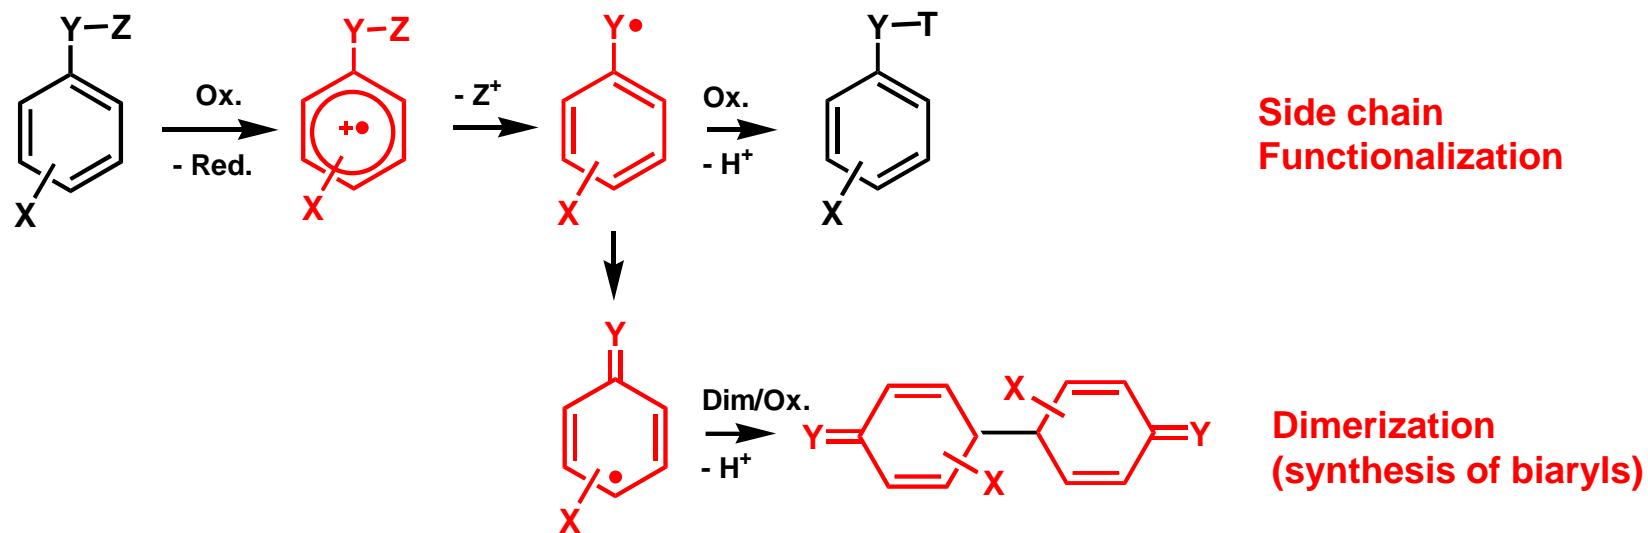

Nucleophilic anions to oxygen, nitrogen, carbon ( $\text{CN}^-$ ), and halides (both as ligand of the metal oxidant or as anions in the medium (i.e. in electrochemical reactions)) can be used. The same substitution can be obtained also by photochemical activation.

Intramolecular processes

# Side-chain Fragmentation via Cation Radicals

# Radical Generated by SET Process

Kornblum and Russell firstly provided details of the Single Electron Transfer (SET) pathway as early as 1966.

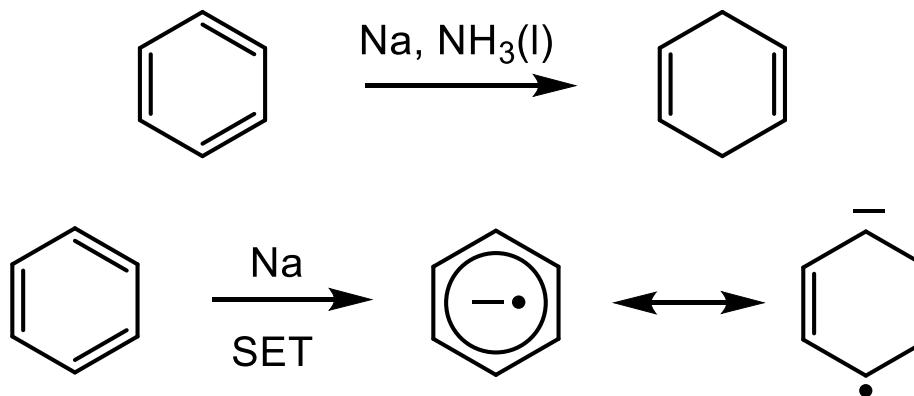

## Mechanistic Pathway:

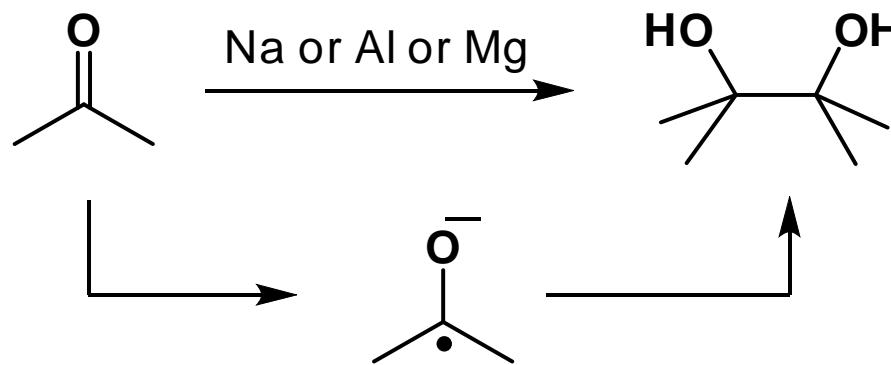

The reaction was then indicated as **S<sub>RN</sub>1** being a Radicals Nucleophilic Substitution in which the rate determining step is the unimolecular (1<sup>th</sup> order) decomposition of anion radical RX<sup>·-</sup>.

# Some Examples of SET Processes

## Birch Reduction

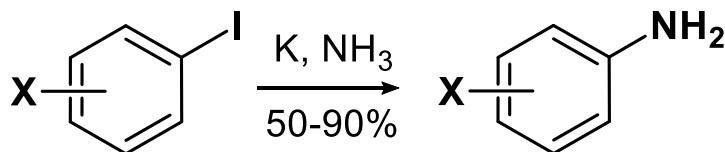

## Pinacol-Coupling Reaction

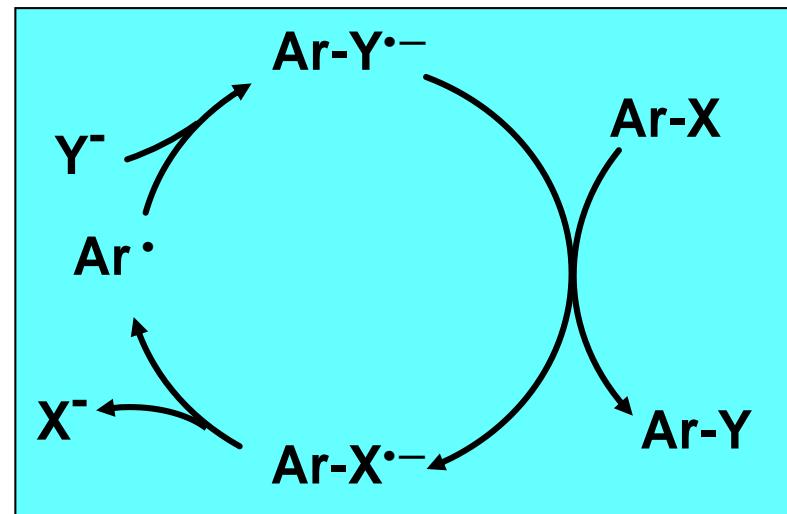

# S<sub>RN</sub>1 - Aromatic Substitution via Anion Radicals

## S<sub>RN</sub>1 Reaction

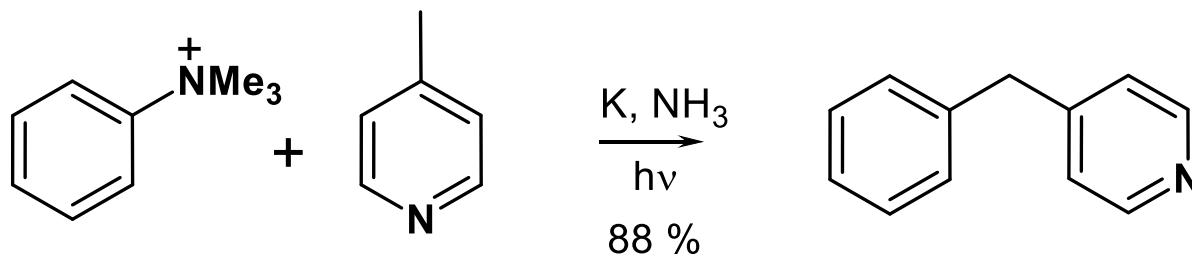

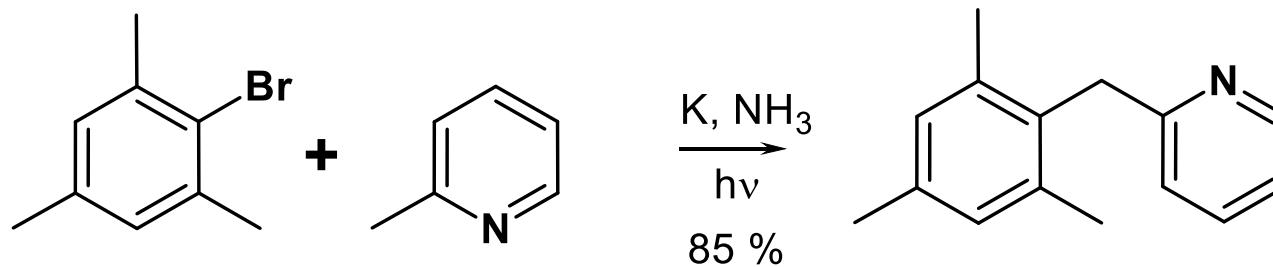

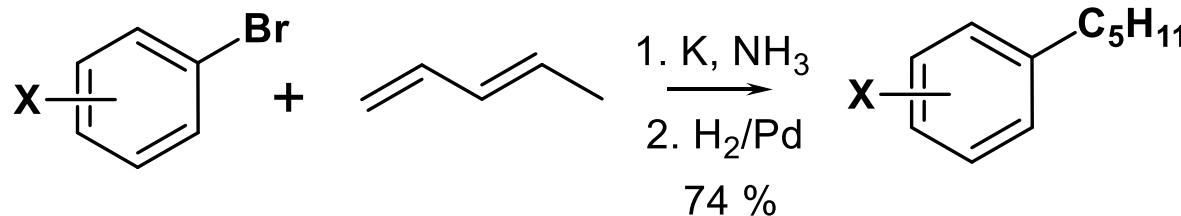

X = 2,3,5-trimethyl

- High regioselectivity
- Can be photo-stimulated
- Sensitive to inhibition
- Traces amount of Ar-H Products

Catalytic cycle in  
S<sub>RN</sub>1 reaction

# S<sub>RN</sub>1 - Substitutions by Conjugated Hydrocarbons

# S<sub>RN</sub>1 - Substitutions by Ketones
